Pelvic Congestion Syndrome is chronic pain in the pelvis due to abnormal dilated veins.

About 60% of patients who suffer from pelvic pain never get a proper diagnosis.

- 39% of women suffer from PCS in their lifetime
- PCS affects around 15% of all women
- PCS accounts for
  - 10% of Gynecological visits
  - 40% of diagnostic laparoscopies
  - 10-15% of hysterectomies

A Minimally Invasive, Image-guided Procedure (MIIP) called Gonadal Vein Embolization offers a safe, effective treatment for women.
